Overview:
The Advanced BioImaging Facility (ABIF) at McGill University in Montreal, Canada is looking for a candidate to fill the position of Microscopy Specialist.

With a strong focus on interdisciplinary work, the position will involve addressing research questions from diverse fields such as cell biology, cancer biology, biophysics, neuroscience and cellular biomechanics. McGill is ranked among the finest research-intensive universities in the world. The ABIF of McGill University has technical capabilities for live cell imaging, total internal reflection fluorescence (TIRF) microscopy, light sheet imaging, fluorescence lifetime imaging microscopy (FLIM), multi-photon microscopy, laser micro-dissection, fluorescence correlation spectroscopy (FCS), image processing and analysis, spectral imaging and high content screening.

The ABIF has developed and run more than 80 workshops and courses, in collaboration with academia and industries, including the bi-annual Montreal Light Microscopy Course (MLMC). More information about the ABIF can be found at: http://www.mcgill.ca/abif

Major Duties and Responsibilities:

1. **Consultation:** Work with researchers to determine appropriate equipment for experiments and to develop experimental designs to address specific research questions. Including consultation on preparing images and data for presentations and publications and the collection of preliminary data for grant applications.

2. **Training:** Perform basic training for users on routine and advanced microscopy platforms. Develop and modify standard protocols for training sessions.

3. **Maintenance:** Execute regular maintenance of the facility equipment. Develop and modify maintenance protocols on an ongoing basis. Interpret quality control information and initiate repairs if necessary. Document all equipment service.

4. **Policies and Procedures:** Ensure all facility users adhere to facility policies and procedures. Ensure appropriate access to equipment for all facility users.

The list of duties and responsibilities outlined above is representative and not a complete and detailed list of tasks, which may be performed by an employee whose position has been matched to this description.

Specific Education and Experience Required:

1. MSc or PhD in preferred areas including Biophysics, Cell Biology, Cancer Biology, Bioengineering.
2. Understanding and hands-on experience in optical microscopy and imaging instruments.
3. Familiarity with advanced light microscopy technologies.
4. Experience working in a dynamic environment. Must be able to manage a diverse set of obligations on a daily basis with rapidly changing demands and priorities.
5. Strong interpersonal skills for working with facility users, principle investigators and potential new clients within the research community.
6. Ability to communicate complex ideas to people new to the field.
7. Ability to work independently and efficiently but also work well as a part of a team.
8. Strong verbal and written communication in English.

Compensation:

The initial appointment is 1-year. There is potential to renew for additional years. Starting salary depending on experience.

Eligibility

International applicants are eligible if they are within 3-years of their PhD degree completion or have Canadian permanent resident status. MSc applicants must be Canadian citizens or permanent residents.

How to Apply:

Candidates should send a cover letter indicating their scientific expertise and career goals and their curriculum vitae to:

Dr. Claire Brown  
Director, Advanced Biomaging Facility (ABIF)  
Associate Professor, Physiology  
McGill University  
mcgill.imaging@gmail.com
